EDUCATION

- **Texas A&M University** College Station, TX
Master of Computer Science; GPA: 3.8/4.0 Aug. 2019 – May. 2021
- **Sun Yat-sen University** Guangzhou, China
Bachelor of Science in Resources Environment; GPA: 3.8/4.0 Sep. 2014 – July. 2018

SELECTED COURSES

- Analysis of Algorithms, Distributed Systems and Cloud Computing, Web Programming with Python and JavaScript, Machine Learning, Software Engineering, Computer Architecture, Operating System

EXPERIENCE

- **SailPoint Technologies** Austin, TX
Software Engineer Intern May, 2020 - Aug 2020
 - Implemented the back end in Java to fulfill a new feature, extending the capabilities of IdentityNow's Access Request service.
 - Refactored the existing code for the current product, improving code readability and modularity.
 - Produced unit and end-to-end tests to improve code quality and maximize code coverage for new and existing features.
 - Used internal developer tools and elastic search in Kibana to make system testing.

PROJECTS

- **Dynamic Approver Callout for IdentityNow Product (Java, Kibana, Gradle, RESTful API, Jenkins, SaaS, Mockito)**
 - IdentityNow is a multi-tenant SaaS identity and access management (IAM) solution.
 - By implementing Java code to organize approval orders, setup delegation policies and set attributes, the new feature allows users to add any identity or group to be the approver.
- **College Map of UC-Berkeley (Java)**
 - Implemented the back end of a web server with multiple functions including zoom in and zoom out, finding the route, auto-complete, and search system.
 - This application is deployed to Heroku. (<http://bearmaps-floramap.herokuapp.com/map.html>)
- **Pizza Order and Delivery website (Python, Django, HTML, CSS, JavaScript)**
 - A web application for handling a pizza restaurant's online orders.
 - Users can browse the restaurant's menu, add items to their cart, and submit their orders, and restaurant owners can add, update, and remove items on the menu.
- **Web Fetching API (AWS: Lambda, API Gateway, S3, EC2, Python)**
 - Built a web API that will accept a parameter from user and trigger a Lambda function to download the web content as an object in the block storage (Amazon S3).
 - Used AWS EC2 to run a virtual machine instance that is constantly running in the back-end to monitor the object storage in S3 and generate hash values for each new page registered.

SKILLS

- **Programming:** Java, Python, JavaScript, Shell, SQL
- **Technologies:** Kibana, Jenkins, Spring Boot, RESTful, HTML, CSS, jQuery, Django, Flask, Jinja, React, Angular, Json, Node, Git, Hadoop, AWS(EC2, S3, Lambda), Spark, Ruby, Flutter
